## Current Information on Radioactivity in Seawater

The sampling points T-1 and T-2-1 near Fukushima Daiichi Nuclear Power Station are sentinels to assess effects on the environment by incidents including a leakage of contaminated water.

All radionuclides (i.e., Cs-134, Cs-137, total Beta and H-3) have remained low level as indicated in the following data from 23 to 29 March 2014 at the sampling points T-1 and T-2-1.

The following URL of the NRA website leads to details of monitoring results:
