September 10, 2021

Mr. Christopher Clement
Scientific Secretary
International Commission on Radiological Protection

Dear Mr. Clement

The Nuclear Regulation Authority (NRA), Japan, is fully aware of the significant efforts of the International Commission on Radiological Protection (ICRP) for development of the System of Radiological Protection which forms the basis of radiation protection regulations worldwide.

In response to your letter (ICRP ref.: 4821-0371-9412), NRA accepts that ICRP 2023, the 7th International Symposium of the System of Radiological Protection and joint meetings of the ICRP Main Commission and Committees will be held in Japan, and National Institute for Quantum and Radiological Science and Technology (QST) will be a local host. QST expressed to organize the local committee with the Japanese academic societies related to radiation protection to host ICRP 2023. NRA expects this cooperation is essential for the success of this symposium.

I hope that ICRP 2023 will be an excellent opportunity to contribute to the future of radiological protection.

Yours sincerely,

FUKETA Toyoshi
Chairman
Nuclear Regulation Authority, Japan
